

Building the Future Together

60 Layers. And counting.

Tiger World Corp partners in a strategic alliance with a Taiwan-based manufacturer of PWBs, operating factories in Taiwan and China, and whose 2014 sales were US\$45 million. Among its capabilities is expertise in the fabrication of high layer count PWBs.

Scheduled Purchase Orders can be held at factory for kanban deliveries. Shipments are usually made for overnight delivery using FedEx or UPS.

Laser Microvias of 0.004" and Vias-in-Pad play a decisive role in the miniaturization of circuit boards and permit the possible reduction of between 2-4 layers by using 0.003" trace/space widths in conjunction with 1/3 and 1/4 oz copper weights.

Laminate selection may include many exotic materials such as Nelco 4000 and 7000 series, Isola I-Speed, IS415 and Polyimide.

Plating options include Lead-Free Horizontal HAL, Immersion Tin, Nickel, Silver and Gold, Hard Gold and wire-bondable Gold.
